

The “Standard” AQUABOX

The **Standard AQUABOX** comprises of a robust rigid plastic container and has a single filter and enough purification tablets to provide 1100 litres of clean drinking water.

- **1,100 litres of drinking water** is capable of meeting the needs of a family of four for at least four months.
- **4 Survival Bags** are included for the family to use to either sleep in or to gather all their belongings into when they first receive the **Aquabox**.
- **Humanitarian Aid** that will enable the victims of the disaster to begin to rebuild their life and to give them some dignity in their hour of need.

The **Aquabox** is specifically designed with Rotary Clubs, Inner Wheel Clubs, Individual Supporters, Schools, Churches, Scouts, Guides and other Community Groups in mind. On receipt of the box, the donor group fills the box with a range of humanitarian aid items selected from our published list. Note that foodstuffs, drugs and medicines should not be included. (See “**Filling an Aquabox**”).

Each and every **Standard Aquabox** is uniquely numbered. The cost includes the cost of delivery to you and it’s return back to our central warehouse in Cromford, once you have filled it, via your local Parcelforce office *plus* a contribution to it’s shipping to it’s final destination, onward distribution and monitoring.

On their return to Cromford, the boxes are then shipped either by aid agencies or direct by us to areas of need in the most appropriate way.

The box itself can be used by the recipient family for many years to come, for example as a vermin proof rice store.

The insertion of a personal note by senders inviting a personal response is encouraged. On rare occasions a "feed-back" reply may be received. Please let us know if this happens.

Standard Aquabox contents;

- *filter kit*
- *water purification tablets*
- *muslin*
- *tap*
- *4 survival bags*
- *Instruction “cartoon”*
